WORK EXPERIENCE

Senior Infrastructure and Site Reliability Engineer, *TheGuarantors, NY, NY* Jul 2024 – Present

- Developed **Helm hooks** to automate database migration, ensuring seamless execution before application deployment, improving deployment reliability and reducing downtime for Kubernetes pods creation
- Created reusable **Terraform** modules for AWS resources such as RDS, EC2, and Datadog, deployed and managed infrastructure across SDLC environments using **Terragrunt**, ensuring consistency and scalability
- Configured and managed Datadog and CloudWatch for monitoring and alerting, creating custom monitors using terraform to track application performance and system health
- Implemented **Canary Deployment** in Kubernetes, achieving 30% faster production rollouts and reducing downtime by 25%, improving release stability and minimizing user impact

Site Reliability Engineer Co-op, *SS&C Intralinks, Waltham, MA* Jul 2023 – Jan 2024

- Orchestrated the deployment and administration of 10+ Linux (RHEL) servers, maintained patching and fine-tuning of SS&C Infrastructure using **Ansible** and **Terraform** to achieve a notable 70% decrease in manual upgrades
- Built **CI/CD pipelines** with Jenkins, using Bash to automate resources within **Kubernetes** cluster
- Optimized talent resource allocation and other services by creating **AWS SNS** topics, subscribed to **SQS queues** and AWS serverless Lambda functions, resulting in a 15% improvement in event automation

Technology Engineer, *Amdocs Development Centre Pune, India* Nov 2019 – Aug 2022

- Led the development of a notification **REST API** service that aggregates E-Commerce and mail notifications. This service was leveraged by more than 10 services for all their notification needs
- Implemented a centralized logging solution using **ELK stack** and **AWS CloudWatch**, reducing troubleshooting time by 50% and enabling proactive monitoring of cloud infrastructure performance and health
- Created and maintained 10+ Docker images and containers using **Docker Compose** and Kubernetes to manage multi-container applications and deploying Docker containers to AWS Elastic Container Registry

Software Engineer, *Accenture Solutions Mumbai, India* Jun 2017 – Oct 2019

- Improved data exchange efficiency with development of HTTP and **RESTful** APIs using **Spring Boot** and **kafka**, facilitating seamless integration with external systems and enhancing communication between various platforms
- Engineered **testing strategies**, scenario development for 25+ methods, test case creation, optimizing integration and performance evaluation of code in testing environments
- Implemented OAuth, JWT, and TLS encryption for enhanced security of financial transactions, alongside **REST** and **SOAP** API versioning and rate limiting for a 20% performance boost

EDUCATION

Master of Science in Information Systems, *Northeastern University, Boston, MA* June 2024

Bachelor of Engineering in Computer Science, *Rajiv Gandhi Technological University, India* May 2017

TECHNICAL SKILLS

Programming Languages	Java, Python, Shell, HTML, CSS, JavaScript
Web Frameworks and Libraries	Spring Boot, React.js, REST, Node.js, Bootstrap, Hibernate
Databases	MySQL, MongoDB, PostgreSQL, DynamoDB, Redis
Software/Tools	Docker, Kubernetes, Git, Jenkins, Datadog, Ansible, Grafana, FluxCD, Splunk, Linux, ELK
Cloud	AWS, Azure, GCP, Terraform, Terragrunt

PROJECTS

ProductFolio Application | *Spring Boot, Java, MySQL, Hibernate, Packer, Terraform, AWS, GitHub Actions*

- Crafted Product Manager App with **Spring boot** and **Hibernate** for **MySQL**, enhancing product management
- Executed **CI/CD** with **GitHub Actions**, integrating **JUnit** for testing and **Packer** for AMI creation, reducing deployment times by 60% and bugs by 25%, streamlining development and deployment
- Augmented **AWS** infrastructure (**EC2**, **Route 53**) with **load balancing**, **auto-scaling**, CloudWatch, **SSL certificates**, and **S3** for GitHub downloads via **Terraform**, doubling user load capacity by 80%

Treasure Hunt Application | *NodeJS, Javascript, AWS EKS, Codebuild, Cloudwatch*

- Designed a dynamic treasure hunt game using **JavaScript**, integrating interactive user interfaces with a Node.js backend, utilizing MongoDB for storing user progress and game data using webhooks
- Used Terraform to provision a cluster on **Amazon EKS**, enabling efficient resource management and containerized deployment of the application in the cloud
- Implemented a CI/CD pipeline with AWS **CodeBuild**, automating the build, test, and deployment processes
